

## Getting to the cloud with SecureHost is just the beginning...

As next generation electronic security solutions advance, it will become fast and simple to add intelligence with Microsoft IoT Hub - the world's most mature, scalable, secure cloud platform.

Advanced electronic security IoT devices including ASG's Man Down solution, VigilReed and Vigilfence solutions harness the power of IoT to add unprecedented levels of intelligence to physical building security.

**Talk to us today to learn more about what the future of electronic security holds.**

## Unlock the future of physical security - from the cloud

ITengine™

Microsoft Azure

INTELLIGENT, SIMPLE SAAS SOLUTION FOR:

- Live Access Control and Electronic Security Management in the Cloud
- Unlock the future of physical security including IoT Connectivity

**Advanced  
Security**

# Welcome to: Next Generation Electronic Security Intelligence

The secure protection of people and assets inside buildings (and all forms of physical infrastructure) requires computer power for monitoring, reporting and day-to-day management. Think access control, CCTV monitoring, intruder detection and so on.

As crime (cyber and otherwise) escalates and sophisticates - so too must the strength of the software solutions that protect us.  
**The optimal solution is now in the Cloud.**

## THE PROBLEM?

### Issues with on-premise software

Today, more often than not, electronic security control software will sit on a desktop PC or server - under a desk or in a cupboard, seldom updated and properly maintained due to escalating costs and labour-intensiveness.

Fixing it when something inevitably goes wrong, can be fraught and costly. When the virtual security system is down - so too is the physical protection of assets and people.

## THE SOLUTION?

### SecureHost™. A robust, feature-rich hosted Azure solution

SecureHost, (an Advanced Security product) is a full SaaS Access Control Security Solution, hosted in Microsoft Azure.

SecureHost bridges the gap between physical and virtual security worlds.

"In an everchanging world, SecureHost makes sense as a robust, agile, and innovative cloud solution. The system ensures our customers are always secure and positioned for the future. SecureHost provides access to a completely new suite of global first products"

Mike Marr, TPT Group CEO

Taking electronic/physical security to the cloud in the robust form of SecureHost strengthens protection, mitigates risk, reduces cost, eliminates vulnerability and more importantly - provides a digital bridge to transformational technologies such as IoT connectivity and artificial intelligence.

**SecureHost allows you to unlock the future of electronic security intelligence - from the cloud.**

## THE BENEFITS

Intelligent, cloud-based site security

### Stronger.

Secure Host's Virtual Private Network (VPN) configuration provides an encrypted private network harnessing the power and strength of Microsoft Azure's functionality, robust security and easy management.

- Eliminate on-premise server vulnerability
- NIST Cybersecurity Framework Compliant
- Scalable, on-demand Security Solution
- Improve Risk Management and Protection

### Simpler.

Access control, intruder alarms, perimeter security and business policy execution are integrated with powerful, intuitive software to create a smarter, more cost-effective way to operate.

- Enable IoT connectivity for a host of benefits
- Create a platform for Machine Learning and AI
- Add advanced sensors and devices without cabling or labour
- Anywhere, anytime access
- Live insights for more control

### Smarter.

Available as a leading-edge SaaS. Simple.

- No servers, no licence, no software maintenance agreements
- Release capital expense
- One bill simplicity
- Seamless autonomous updates (no patching)
- Easy tracking, reporting and management
